Student Academic Record Book

Faculty User Manual

Beginner guide for faculty members

Revised and checked 23 October 2026

Use this manual to manage your subjects, record classes, enter marks, review feedback, and prepare course reports. Each numbered feature tells you where to go, what to do, and how to check the result.

Start here

1. Get the staff portal address, username, and password from your college.
2. Log in and change your initial password.
3. Check your subjects and weekly timetable. Ask your HOD to correct missing assignments.
4. Before teaching, check Course Outcomes and prepare your lesson plan.
5. After each class, save attendance and the teaching diary.
6. After each assessment, enter marks, review them, and complete final submission.
7. At semester end, check attainment, reconcile course delivery, and submit your course completion report.

How to follow the instructions

- **Bold text** names a menu, button, or field on the screen.
- A path such as **Other Options > Enter CIA Marks & MetaData** tells you what to click, in order.
- Always check the subject code, class or section, and academic year before entering data.
- A success message confirms an action. Reopen the relevant record to check the saved details.
- Some features depend on college settings. A missing option or a disabled button may require help from your HOD or portal administrator.
- On a phone or a small screen, scroll sideways inside wide student or marks tables to see every column.

Use the maximum marks, available dates, and access messages shown for your selected subject. The college controls which features are available to your account.

Find a feature

Use this feature index to find a feature number. The Word and PDF copies also include linked topics and page numbers. Word provides a Navigation Pane; the PDF provides bookmarks.

Topic	Features	Page
Common words and main menu	Getting started	3
Account login password and logout	1 to 3	4
Timetable	4	5
Mark class attendance	5	6
Correct attendance and add missing students	6 to 7	7
Delete a session and add diary only	8 to 10	8
View attendance, diary, CIA records, and downloads	11 to 14	9
Add, import, and edit Course Outcomes	15 to 17	10
Map outcomes and create a lesson plan	18 to 19	11
Import, edit, and remove lesson plans	20 to 22	12
Open CIA and prepare question details	23 to 24	13
Enter and upload detailed CIA marks	25 to 26	14
Correct or rebuild CIA marks and questions	27	15
Submit CIA totals and use overall entry	28 to 29	16
Laboratory marks, rubrics, and bulk entry	30 to 31	17
Design Thinking, postgraduate, and project marks	32 to 34	19
Assessment attachments	35	20
Shared subjects and grouped classes	36 to 37	21
SEE question details and question marks	38 to 39	22
SEE totals, result sync, and evidence import	40 to 42	23
Analysis and attainment reports	43 to 44	24
Student feedback and faculty appraisal	45 to 46	25
Course delivery matching and completion	47 to 48	26
Improvement actions and Action Taken Reports	49 to 51	27
Optional AI drafts	52	28
Course reports, learning help, and subject details	53 to 55	29
Common problems and who can help	Troubleshooting	30

Common words

- **HOD:** Head of Department.
- **CO:** Course Outcome, a statement of what students should learn in a subject.
- **PO / PSO:** Program Outcome / Program Specific Outcome.
- **CIA:** Continuous Internal Assessment, such as internal tests and assignments.
- **SEE:** Semester End Examination.
- **OBE:** Outcome Based Education, which checks whether learning outcomes are achieved.
- **CQI / ATR:** Continuous Quality Improvement / Action Taken Report.
- **CSV:** A spreadsheet saved as comma separated values for upload. An Excel workbook ending in .xlsx is a different file type.
- **QP metadata:** Question paper details, including question marks, Bloom levels, and CO mappings.
- **Attainment:** A measure of how well students achieved the learning outcomes.
- **Articulation matrix:** A table linking COs to the program's POs and PSOs.
- **Reconciliation:** Matching actual teaching diary entries to planned lectures.
- **Pedagogy:** The teaching method, such as a discussion, demonstration, or lecture.

Understand the main menu

- **Home:** Read portal guidance and open your weekly timetable or learning resources.
- **Mark Attendance:** Record student attendance and the topics taught.
- **Show Attendance:** View attendance, diary entries, CIA records, and related downloads.
- **Other Options:** Open course planning, assessments, feedback, and attendance utilities.
- **Change Password:** Set a new password for your account.
- **Logout:** End your session after saving your work.

Save or submit

Save, **Save Draft**, and **Save without Submitting** keep work at the stage stated on that screen. **Submit Final Marks**, **Finalize reviewed marks**, and **Submit Course Completion to HOD** complete a further submission or review step. Always check the resulting status.

Account

Feature 1 Log in to the faculty portal

Where: Staff portal login page.

1. Open the staff portal address supplied by your college.
2. Enter your username and password exactly as provided.
3. Click **Login**.
4. Check that the faculty **Home** page opens under your account.

Check: Your name and the faculty menu appear on **Home**.

If login is locked: Read the waiting time shown. The current login page locks further attempts for 15 minutes after 5 failed attempts.

Feature 2 Change your password

Where: Change Password in the main menu.

1. Enter your current password in **Enter Existing Password**.
2. Enter a password different from the current one in **Enter New Password**.
3. Enter it again in **Confirm New Password**.
4. Click **Update** and read the message.
5. If successful, use the new password the next time you log in.

Help: If you cannot remember the current password, contact the college staff who manage faculty accounts for a reset.

Feature 3 Log out safely

Where: Logout in the main menu.

1. Save the work you are entering and check the success message.
2. Click **Logout**.
3. Check that you return to the login page.
4. Close the browser tab when using a shared computer.

Timetable

Feature 4 View your weekly timetable

Where: Home > My Weekly Timetable.

1. Open **My Weekly Timetable**.
2. Review your scheduled days, periods, subjects, classes, and rooms where provided.
3. Use **Grid View** or **List View** where available. On a small screen, use the layout provided for that screen size.
4. Note any missing or incorrect allocation and contact your HOD.

Check: This is your own timetable. The **Where is ...?** panel shows your expected class from that schedule. Ask the HOD to correct allocations.

Mark class attendance

Feature 5 Save attendance and the teaching diary

Where: Mark Attendance in the main menu.

Before you start: Your subject and students must be assigned. Keep the class date, periods, and list of present students ready.

1. Select the **Subject**. Check its code, class, section, and academic year.
2. Select the class **Date** within the allowed course dates. Future attendance dates are not accepted.
3. Click **Get Students**.
4. Enter the topics covered in **Teaching Diary**.
5. Select the correct **Period / Hours** from the available list.
6. Tick the students who were present. Leave absent students unticked.
7. If most students were present, use **Select/Unselect All Students**, then untick those who were absent.
8. Check the displayed number of students present and tick the confirmation checkbox.
9. Click **Save Attendance** once and wait for the result.
10. Open **Show Attendance** and verify the date, periods, attendance, and diary.

Check: The success message says attendance was marked. The saved session appears in the attendance record.

Example: If 28 of 30 students attended, tick those 28 students. Confirm that the displayed count is 28 before saving.

For more than one period: Select multiple periods only when the same attendance and diary apply to all of them. If the students or topics differ, save the periods separately.

If an hour is missing: It may already be recorded or unavailable for that date. Check **Show Attendance** before trying another date or period.

If a student is missing: Ask the HOD to check subject enrollment. Do not select another student's name as a substitute.

If the connection fails: Reopen **Show Attendance** to check whether the session saved before submitting again.

Correct student attendance

Feature 6 Change one student from present to absent or absent to present

Where: Other Options > Update Single Student Attendance.

Before you start: Use this for an existing attendance entry. The date must be today or no more than 7 days earlier.

1. Select the **Subject** and **Date**.
2. Click **Get Hours**.
3. Select the **Hour**, then click **Get Students**.
4. Select the **Student**, then click **Get Attendance**.
5. Check the student's current status.
6. Choose **Present** or **Absent** in **Change Status To**.
7. Enter a clear **Reason for correction**.
8. Click **Update Attendance**.
9. Verify the changed status in **Show Attendance**.

Example reason: "Student attended period 2 but was accidentally marked absent."

If the date is too old: Contact your HOD or portal administrator. The faculty correction screen will not accept a date outside its allowed window.

Feature 7 Add a missing student to an already recorded session

Where: Other Options > Mark Attendance (For Exceptional Cases).

Use when: A student has no attendance entry for a session that is already recorded, for example after a late enrollment is added.

1. Select the **Subject** and **Date**.
2. Click **Get Marked Hours**.
3. Select the recorded **Hour**.
4. Click **Get Unmarked Students**.
5. Tick only the listed students whose presence you can confirm.
6. Check the selected count and tick the confirmation checkbox.
7. Click **Mark Selected Students as Present**.
8. Verify the new entry in **Show Attendance**.

Check: This adds present entries for selected students who had no record. To change an existing absent entry, use feature 6.

Session deletion and diary only

Feature 8 Request deletion of a wrong session

Where: Other Options > Submit New Deletion Request.

Use when: The whole attendance session was entered for the wrong date, subject, or period. The HOD reviews the request.

1. Select the **Subject** and **Date**, then click **Get Hours**.
2. Select the wrong **Hour**, then click **Get Details**.
3. Check the displayed session carefully.
4. Enter a specific **Reason for Delete**.
5. Click **Submit Request**.
6. Track the decision using feature 9. If approved, check **Show Attendance** before entering any replacement session.

Check: Sending a request does not immediately delete the session. Approval removes the affected attendance and diary entries.

Feature 9 Track a deletion request

Where: Other Options > View Submitted Requests.

1. Open the request list.
2. Find the subject, class date, and hour you requested.
3. Read the status: **Pending**, **Approved**, or **Rejected**.
4. For a pending request, allow the HOD to review it. For a rejected request, discuss the correction with the HOD.
5. For an approved request, verify that the intended session was removed.

Feature 10 Record a diary entry without student attendance

Where: Other Options > Add Diary Only (No Attendance).

1. Select the **Subject** and **Date**.
2. Click **Get Timings**.
3. Enter the diary text and select the relevant period or periods.
4. Tick **I accept, Only Diary is Added Without Student Attendance**.
5. Click **Save Dairy**. This is the button spelling in the portal.
6. Open **Show Attendance > Show Diary** and check the entry.

Check: This records only the diary. It does not mark students present or absent. Follow your college's practice for when to use it.

Attendance records and downloads

Feature 11 View overall attendance

Where: Show Attendance in the main menu.

1. Select the **Subject**.
2. To view the full available period, leave **Select Date Range? : No** selected.
3. To limit the report, choose **Yes** and enter **Start Date** and **End Date**.
4. Click **View Overall Attendance**.
5. Review each student's **Overall Percentage** and the attendance shortage lists below it. Use the detailed view in feature 12 for class counts.

Feature 12 View detailed attendance and download the e Bluebook

Where: Show Attendance.

1. Select the subject and, if needed, the date range.
2. Click **Detailed Attendance & e-Bluebook**.
3. Review the date and period entries for the students.
4. Click **Download Detailed Attendance** for a CSV report, or **Download e-Bluebook PDF** for the academic record book, where enabled.
5. Open the downloaded file and check the subject and date coverage.

Check: The detailed attendance download uses your selected dates. The e-Bluebook also contains course information beyond the attendance pages; check each section's coverage.

Feature 13 Read the saved teaching diary

Where: Show Attendance.

1. Select the subject and date range if required.
2. Click **Show Diary**.
3. Check the dates, periods, and topics covered.
4. Use these records when matching teaching to your lesson plan in feature 47.

Feature 14 View CIA records and export the marks sheet

Where: Show Attendance.

1. Select the subject.
2. Click **Show Continuous Internal Assessment**.
3. Review the available assessment marks and attachments.
4. Click **Download as Excel** where shown to save the displayed marks report.
5. Open the file and check student names, assessments, and totals.

Date range: Attendance and diary records use the date filter; CIA records use assessment data. For an empty report, check filters and final marks submission.

Course Outcomes

Feature 15 Import approved Course Outcomes

Where: Other Options > Add / View Course Outcomes (COs).

1. Select the subject and click **Get COs**.
2. If approved curriculum outcomes are available, review the import option and any existing outcomes.
3. Click **Import Course Outcomes & Matrix** when offered. If the screen says **Inherited from Curriculum Master Catalog**, use **Import as Editable Subject COs** when you need subject copies.
4. Read the result message.
5. Check the imported CO statements and any imported matrix mappings.

Before importing: Coordinate with your course team. Outcomes and matrix mappings may synchronize with the curriculum master and parallel sections.

Feature 16 Add Course Outcomes manually

Where: The same Course Outcomes screen.

1. Select the subject and click **Get COs**.
2. If no outcomes are listed, enter how many COs the approved syllabus defines and click **Generate Fields**.
3. For each CO, enter its statement, choose its **Bloom's Taxonomy Level (BTL)**, and enter the approved **Target Threshold Limit (%)**.
4. Click **Save All COs**.
5. To add a missing CO later, click **Click here to Add New/Missing CO**.
6. Check the automatically assigned **CO Number**. Enter the statement, Bloom level, and threshold, then click **Add CO**.
7. Check that every required CO is listed once.

Example statement: "Write SQL queries to retrieve information from a database."

Feature 17 Edit an existing Course Outcome

Where: The same Course Outcomes screen.

1. Load the subject's COs.
2. Click the edit button beside the relevant CO.
3. Correct the statement, Bloom level, or threshold as permitted.
4. Click **Update CO** followed by the CO number, such as **Update CO1**.
5. Reload the CO list and check the change.

Check: Follow the approved syllabus and department targets. If fields are locked or a change affects other sections, ask your course coordinator or HOD before proceeding.

Outcome mapping and lesson planning

Feature 18 Map Course Outcomes to program outcomes

Where: Other Options > Add / View CO-PO/PSO Articulation Matrix.

Before you start: COs and department PO / PSO definitions must be available.

1. Select the subject.
2. Click **Add / View Matrix**.
3. Read the CO rows and PO / PSO columns.
4. Where entry is available, type a strength for each relevant mapping: **1 = Low**, **2 = Medium**, or **3 = High**.
5. Leave unrelated mapping cells blank.
6. Click **Add Mappings** and confirm the prompt.
7. Reload the matrix and check the saved values.

Check: Existing mappings may open for viewing only. Coordinate corrections with the HOD. The portal can synchronize mappings with the master curriculum and other sections.

Feature 19 Add a lecture to your lesson plan

Where: Other Options > Add / View Lesson Plan (Course Delivery Plan).

Before you start: Check the subject's COs and keep the syllabus ready.

1. Select the course and click **Load Plan**.
2. Enter **Unit #** and a unique **Lecture #**.
3. Select the **Target Course Outcome**.
4. Enter the **Planned Syllabus Topic / Concept**.
5. Choose the **Bloom's Level** and **Teaching Pedagogy**.
6. Enter **Reference Material** if needed.
7. Click **Save Lecture Plan**.
8. Check the lecture in the plan table. Repeat for the remaining lectures.

Example: Unit 1, Lecture 1, topic "Introduction to database systems," linked to the relevant CO, with the appropriate teaching method.

Check: A lesson plan describes what you intend to teach. Record the actual topics taught in the diary when you conduct each class.

Import and maintain the lesson plan

Feature 20 Upload a full lesson plan from a spreadsheet

Where: The lesson plan screen, under **Bulk Excel / CSV Import**.

1. Load the correct subject's plan.
2. Click **Download CSV Template**.
3. Open the template in Excel or another spreadsheet application.
4. Replace the example rows with your actual lecture plan. Keep the existing column order and headings. Use unique lecture numbers and valid CO numbers for this subject.
5. Save the completed file as **CSV**, keeping the template headings unchanged.
6. Choose the file under **Upload Completed CSV**.
7. Click **Upload & Populate Plan**.
8. Read the imported or updated count and any skipped-row message. Check the lecture numbers, topics, COs, Bloom levels, and planned hours in the resulting table.

Check: A row with an existing lecture number updates that lecture. Upload can save valid rows while skipping others. Review the saved plan before correcting and uploading again.

Feature 21 Edit or delete one planned lecture

Where: The lesson plan table.

1. Select the subject and click **Load Plan**.
2. Find the lecture by its number and topic.
3. To edit it, click the **Edit Lecture** icon, change the fields, and click **Save Lecture Plan**.
4. To remove it, click the **Delete Lecture** icon and confirm when prompted.
5. Check the updated table and lecture count.

Feature 22 Clear the whole lesson plan

Where: The lesson plan screen > **Clear All Lectures**.

1. Confirm the subject and review the full plan.
2. Keep a copy of the plan you need to retain before clearing it.
3. Click **Clear All Lectures**.
4. Read and accept the confirmation only if you intend to remove the entire plan.
5. Check the result before adding or importing the replacement plan.

If editing is locked: A submitted or approved course completion audit can lock the lesson plan. Ask the HOD to review or return the submission when a correction is needed.

Begin CIA entry and question details

Feature 23 Open the correct internal assessment

Where: Other Options > Enter CIA Marks & MetaData.

1. Select the **Subject**.
2. Click **Get Continuous Assessment Status**.
3. Find the required assessment, such as CIA 1 or CIA 2, or the component shown for your course type.
4. Check whether its status is **Not Added** or **Added**.
5. Choose **Add/View Detailed** to enter question or activity marks, **Add Overall** or **Add** for the available totals form, or **Attachments** to manage supporting files.

Choose your workflow: Use features 24 to 29 for theory, features 30 to 31 for laboratory, feature 32 for Design Thinking, feature 33 for PG, and feature 34 for projects.

Feature 24 Add question paper details and CO mappings

Where: The selected CIA assessment's **Add/View Detailed** page.

1. Check that COs are already defined. Find the relevant component, such as Subjective, Objective, or Assignment.
2. Click **Add Questions**. Select the required template if a template list appears; the page loads the next form automatically.
3. For Subjective or Internal Exam components, choose **Single**, **a & b**, or **a & b & c** for each question, then click **Next: Add Question MetaData**.
4. Objective, Assignment, or Activity components may open the metadata table directly. Continue with the table shown.
5. Check each question's label and marks. Set editable marks, choose the question or activity type and Bloom level, and tick at least one relevant CO for every row.
6. Click **Save Question MetaData**.
7. Review **View Questions**, then use **Next Step: Marks Entry** when ready.

To add another assignment: Return to the component list, click **Click here Add New Assignment**, and configure its questions and marks.

Check: The metadata must match the actual assessment paper. Maximum marks depend on the selected subject and regulation.

Before saving: Check the total marks of all subparts. The parts of one question must add up to that question's intended maximum.

Detailed CIA marks

Feature 25 Enter marks question by question

Where: CIA component list > **Marks Entry**, or **View Questions > Next Step: Marks Entry**.

1. Check the subject, CIA number, and component name.
2. Match each student using the admission number and name.
3. Enter every required score within the displayed question maximum. The current detailed CIA grid uses increments of 0.5 marks.
4. Review the entries against your evaluation record.
5. Click **Save Marks**.
6. Check the saved **View Marks** table.
7. Repeat for the other components before submitting overall CIA marks in feature 28.

Feature 26 Upload question marks using CSV

Where: The selected component's **Marks Entry** screen.

Before you start: CSV tools appear for initial entry. If this component already has student scores and opens **View Marks**, use **Edit Marks** for corrections.

1. Click **Download CSV Template**.
2. Open the file and retain its student identifiers and question headings exactly.
3. Enter the evaluated marks within each question's maximum. Check every required cell.
4. Save as CSV and choose the file on the portal.
5. Click **Upload CSV**.
6. Check the saved marks for every student and question. Correct missing or incorrect entries before final submission.

Check: An upload message alone is not enough. Review the resulting table, especially values near the maximum and any cells that were blank in your file.

CIA blanks: This import can treat a blank mark as zero. Upload only verified scores and enter zero explicitly for an assessed zero. Use PG draft rules in feature 33 for unassessed PG scores.

Correct CIA details before submission

Feature 27 Correct marks or question details before final submission

Where: The CIA component's **View Marks** or **View Questions** page.

To correct individual scores:

1. Open the component's **View Marks** page.
2. Click **Edit Marks**.
3. Correct the student's scores and click **Save Marks**.
4. Review the saved table and return using **CIA Components**.

To remove all student scores for one component:

1. Open **View Marks** and confirm the component name.
2. Click **Delete Marks** and read the confirmation. It removes all student scores for that component.
3. Confirm only if you intend to re-enter those scores.
4. Open **Marks Entry**, enter or upload the replacement scores, and check them again.

To rebuild incorrect question metadata:

1. Open **View Questions** for the correct component.
2. Click **Delete Meta Data** and read the warning in the confirmation window.
3. Confirm the deletion only after keeping any evaluation record you need. Linked question scores can be removed.
4. Return to the component list and use **Add Questions** to recreate the correct structure and CO mappings.
5. Re-enter the component's student scores and review them before final CIA submission.

If controls are unavailable: Final submission or college permissions may lock changes. Contact your HOD or portal administrator for the permitted correction process.

Review and submit CIA totals

Feature 28 Submit CIA totals calculated from detailed marks

Where: CIA component list > **View & Submit CIA Marks**.

Before you start: Save detailed marks for all required components.

1. Open the assessment's **Add/View Detailed** page.
2. Check that the required components and marks are complete.
3. Click **View & Submit CIA Marks**.
4. Review each student's component totals and overall total.
5. If a value is wrong, return to the relevant detailed marks screen and correct it.
6. When the totals are correct, click **Submit Final Marks**. The theory, lab, and Design Thinking review pages use this label.
7. Return to the assessment status page, select the subject again if needed, and check the submitted record.

Check: Saving detailed marks and submitting final CIA marks are separate actions. Use **View Submitted CIA Marks** to check the finalized record where shown.

Feature 29 Enter overall theory marks directly

Where: CIA assessment status > **Add Overall**, where available.

Use when: Your college asks for overall component marks and you have the verified totals ready. Question details are needed for question-based analysis.

1. Open the selected theory assessment's overall entry form.
2. Enter the student's Subjective, Objective, and Assignment marks in the matching columns.
3. Keep every value within the maximum printed on the screen.
4. To return later, click **Save without Submitting**.
5. When all entries are complete and checked, click **Validate & Submit Marks**.
6. Return to the assessment status page, select the subject again if needed, and open **View Overall** or **View**.
7. Check the submitted student marks and totals.

Remember: A temporary save is a draft. Use the displayed assessment rules; do not assume that all courses share the same weighting or maximum.

Laboratory assessment

Feature 30 Enter laboratory totals and use the rubrics assistant

Where: CIA assessment status > laboratory subject > **Add** under Overall.

1. Open the laboratory assessment and check its displayed maximum marks.
2. Enter each student's day-to-day assessment mark and internal test mark.
3. If rubrics are enabled, click the calculator button beside that student's **Day-to-Day** score.
4. Enter the score for each configured criterion within its limit.
5. Click **Apply to Student Score**.
6. Check the resulting day-to-day total and the internal test mark in the main form.
7. Click **Save without Submitting** to continue later, or **Validate & Submit Marks** when complete.
8. Open the submitted laboratory marks and verify them.

Check: Applying a rubric fills the student's score in the form. Complete the main form's save or submit action as well.

Drafts: Laboratory draft saving still requires valid numeric scores in both columns for all listed students. Keep the rubric breakdown for final submission; a draft saves the score totals.

Laboratory marks by date

Feature 31 Record laboratory marks by date and in bulk

Where: Laboratory CIA > **Add/View Detailed**.

1. Click **Click here to Add New Day-to-Day Component**.
2. Select the activity date and click **Confirm Add Day-to-Day Component**.
3. Check the new date row in the component list. The portal creates the date question automatically. Use that row's **Marks Entry** to enter scores for one date.
4. For several dates, open **Bulk Day-to-Day Marks Entry**.
5. Select the date columns you want to enter, fill every required student score within the shown maximum, and click **Save Selected Marks**. Dates marked **already entered** are skipped by this bulk tool.
6. Alternatively, download the CSV template from this screen, fill it without changing identifiers or headings, and use **Upload CSV**.
7. Review the saved marks for all selected dates.
8. Enter the **Internal Exam** component's question details and student marks as well. Then open **View & Submit CIA Marks**, check both totals, and click **Submit Final Marks**.

Choose the required method: Follow the college's laboratory assessment process. Check existing marks before using another entry method for the same assessment.

To enter one date only: Use that date component's **Marks Entry** and **Save Marks**. Correct existing date scores through **View Marks > Edit Marks**, before final submission.

If the bulk link is missing: Bulk Day-to-Day Marks Entry appears after the course end date when unentered date components remain. During the course, use each date's **Marks Entry**. Use the bulk tool for initial entry; it skips dates that already contain scores.

Other internal assessment types

Feature 32 Enter Design Thinking and Innovation marks

Where: CIA assessment status > assigned Design Thinking and Innovation subject.

1. For detailed entry, open **Add/View Detailed** and use **Click here Add New Activity** as needed.
2. Configure each Activity and all listed test components: **Subjective-1**, **Objective-1**, **Subjective-2**, and **Objective-2**. Enter and save the student marks for each component.
3. Open **View & Submit CIA Marks**, review the calculated Activity and Internal totals, and click **Submit Final Marks** when complete.
4. If using the overall **Add** form instead, enter **Day-to-Day / Activity** and **Internal Test** marks within the shown maxima.
5. Save the draft or use **Validate & Submit Marks**, then verify the submitted record.

Feature 33 Enter or correct postgraduate CIA marks

Where: CIA assessment status > assigned PG subject.

1. Review the component rows and maximum marks shown for this subject.
2. Click **Add** beside the required component.
3. Enter marks for the listed students. Use **Save draft** if assessment is incomplete.
4. Enter zero for an assessed score of zero; leave an unassessed score blank only in a draft.
5. When every enrolled student has a mark, click **Validate & submit marks**.
6. Repeat for every required component and review the submitted counts.
7. For a correction, open **View / correct > Correct marks**, change the marks, enter **Reason for correction**, and click **Validate & update marks**.

If totals are unavailable: An approved CIA scheme may still be needed. Ask the HOD or academic section; do not invent a total or weighting.

Feature 34 Enter project assessment marks

Where: CIA assessment status > assigned project subject > **Add**.

1. Check the project subject and student list.
2. Enter the **Supervisor** and **P. R. C.** marks within the printed maxima. P. R. C. refers to the Project Review Committee.
3. Review the calculated total for each student.
4. Click **Save without Submitting** for a draft or **Validate & Submit Marks** for the completed assessment.
5. Open **View** from the assessment status page and check the submitted totals.

Assessment attachments

Feature 35 Upload and manage CIA supporting files

Where: CIA assessment status > **Attachments** for the correct assessment.

Use for: Question papers, evaluation records, and other assessment evidence requested by the college.

1. Check the subject and assessment number at the top of the page.
2. Click **Add New Attachment**.
3. Enter a clear **Title of the File**, such as "CIA 1 Question Paper".
4. Choose the file under **Attachment**.
5. Click **Submit**.
6. Check the file title in the attachment list.
7. Click **Download** and open the file to confirm it is the correct document.

File limits: Use .pdf, .doc, .docx, .jpg, .png, .xls, .xlsx, or .csv. Keep each file below 20 MB; your college's server may impose a lower upload limit.

Attachment limit: The screen allows up to 5 attachments per assessment. If the limit is reached, review existing files before adding another.

To replace an incorrect file: Download a copy if needed, use the **X** delete control beside the correct file, and then upload the replacement. Check the title and contents again.

To download marks evidence: Use the component **Download** links where available on this page to get the marks CSV files.

To use the supplied formats: Open the reference links for the sample evaluation record in Excel and the sample question paper in Word. Fill your own copy and upload it to the correct assessment when required.

If upload or deletion is disabled: The metadata module may be read only, or the attachment limit may have been reached. Check the message and contact the portal administrator if access is needed.

Shared subjects and grouped classes

Feature 36 Mark attendance for a combined session

Where: Other Options > Mark Attendance (For Grouped Sessions).

Use when: You teach an approved combined session across multiple assigned sections, such as an open elective.

1. Select assigned offerings with the **same subject code**. Hold **Ctrl** on Windows or **Command** on Mac to select multiple items.
2. Choose the class **Date**.
3. Click **Get Combined Student List**.
4. Check that all intended sections and students appear.
5. Enter the diary topic and select the correct available periods.
6. Tick the present students, check the present count, and tick the confirmation checkbox.
7. Click **Save Grouped Attendance**.
8. Verify the session separately for each subject offering under **Show Attendance**.

Check: The selected offerings must be suitable for the same grouped session. If the portal rejects the combination, check subject codes and section assignments with the HOD.

If only some offerings saved: Read the success and failure counts. Check every offering's record and retry only the missing sessions. The available-period list is taken from the first selected offering, so check that the chosen periods are suitable for all of them.

Feature 37 Copy CIA question details and attachments to parallel sections

Where: Other Options > Import Grouped CIA Data.

1. Choose the already configured **Source Subject**.
2. Click **Next: Select Targets**.
3. Select the target offerings with the same subject code.
4. Choose **CIA 1** or **CIA 2**.
5. Click **Next: Check for Missing Data**.
6. Review the missing component metadata and attachment lists.
7. Leave ticked only the items you want to copy. Click **Import Selected Items** and accept the confirmation after checking the target list.
8. Open each target assessment and check the imported questions and attachments.

Check: This tool copies missing CIA setup details and attachments. Enter and verify each section's student marks separately.

SEE question details and detailed marks

Feature 38 Set up the SEE question paper

Where: Other Options > Enter SEE Marks & MetaData.

Before you start: Define the subject's COs and confirm the approved question paper structure.

1. Select the course and click **Load SEE Status**.
2. Under **Step 1: QP Metadata**, click **Add Structure**, or **QP Structure** if it is already configured.
3. Review the applicable question template and select any required subpart breakdown.
4. Click **Next: Define Marks, Bloom's & COs**.
5. Check question labels, marks, and compulsory or either-or structure.
6. Select the Bloom level and relevant COs for each question or subquestion.
7. Click **Save SEE Question Paper Metadata**, confirm the prompt, and check the result on the SEE status page.

If changes are blocked: Existing evidence can restrict blueprint changes. Ask the HOD or exam team for the permitted revision process.

Feature 39 Enter SEE marks question by question

Where: SEE status > **Mode A: Detailed Entry > Question Entry**.

1. Confirm the correct SEE question structure is configured.
2. Check student identifiers and question columns.
3. Enter scores within the displayed limits. Enter **0** for an assessed zero. Leave unattempted alternatives blank; complete all compulsory questions and every part of the attempted alternative.
4. For upload, click **Download CSV Template**, fill the scores without changing identifiers or headings, select the completed CSV, and click **Upload Marks CSV**. Use a file up to 10 MB.
5. Click **Save Question Scores** to save the grid, or **Save & Proceed to Review** to continue to totals review.
6. Open **Condensed Review** after a CSV upload, or continue from the grid. Check each student's choice decisions, gross score, final score, and **Evidence** column. Resolve **Missing marks** before finalizing.
7. Use **Edit question marks** if a correction is required.
8. When correct, click **Finalize reviewed marks**.
9. Reopen the SEE record and verify the finalized totals.

Check: Saving the question scores alone does not complete the final review step.

After a later score correction: Save the question scores, review the totals again, and click **Finalize reviewed marks** again. Correcting question evidence can make earlier detailed totals out of date.

SEE totals and results import

Feature 40 Enter final SEE totals directly

Where: SEE status > **Mode B: Direct Entry > Direct Marks**.

1. Check the QP metadata is configured and obtain the verified university ledger totals.
2. Open **Direct Marks** and check the displayed maximum.
3. Enter the final external score for each listed student.
4. Review every total against the ledger.
5. Click **Submit University Ledger Scores** and confirm the prompt.
6. Check the saved SEE totals and the resulting analysis.

Check: Overall totals provide estimated CO performance. Detailed mapped question marks provide measured question evidence.

Feature 41 Sync SEE marks from published results

Where: SEE status > **Mode C: Auto-Sync**.

1. Obtain the **Published notification ID** for the matching **regular examination** from the exam or academic section. Supplementary and revaluation notifications are not accepted by this sync.
2. Check the course, notification, and existing SEE marks.
3. Enter the notification ID.
4. If an authorized correction requires replacing existing marks, tick **Replace existing marks** and enter the replacement reason.
5. Click **Auto-Sync Results** and confirm the prompt.
6. Read the result and check the imported student totals.

Feature 42 Import external results as attainment evidence

Where: SEE page > **Import results for attainment**.

1. Select the course and click **Load**. The page then lists that course's question-wise evidence components.
2. Choose **Aggregate marks / grades** or a question-wise component under **Evidence**, then click **Load** again.
3. Click **Download course template** and fill it using the official results. Expand **Supported columns** for guidance on marks, grades, and question scores.
4. Save as CSV, choose a file up to 10 MB, and click **Preview import**.
5. Review the valid-row count, skipped-course count, and errors. The preview table shows up to 100 rows; check the entire file before committing it.
6. If replacing existing marks, tick **Replace existing marks for these students** and give the required reason.
7. Click **Confirm reviewed import**, then verify the saved evidence in analysis.

Check: Grade-only estimates require an approved grade profile. Invalid rows prevent import; unrelated subject codes are skipped and counted. This evidence import does not publish official student results.

Analysis and attainment

Feature 43 View assessment performance and outcome attainment

Where: Other Options > View CIA Analysis & Attainment.

1. Select the subject and wait for the assessment list to load. If **All Batches Combined** appears, use it only when you want that combined analysis.
2. Choose an available **Assessment**, such as **CIA 1**, **CIA 2**, **Overall CIA**, **Lab CIA**, or **Semester End Exam (SEE)**.
3. Click **Load Analysis**.
4. Review the student performance summaries and charts shown.
5. Review CO attainment, targets, gaps, and PO / PSO mappings where available.
6. Check evidence coverage before drawing conclusions.
7. Note outcomes that need improvement and use feature 49 to record an action.

How to read the evidence:

- **Measured:** Calculated using marks for questions mapped to outcomes.
- **Estimated:** Inferred from overall marks or grades.
- **Missing:** Required marks, mappings, policy, or feedback evidence is unavailable.

Use the analysis tabs: Open **Overview** for performance summaries; **Outcome Analysis (CO/PO)** for outcome charts; **Cognitive Level (Bloom's)** for question-level distribution; **CO-PO Matrix** for outcome links; and **Other Insights** for additional charts. When available, **Direct & Overall Attainment (NBA/NAAC)** combines the available CIA, SEE, and feedback evidence.

If the result seems wrong: Check the course and assessment filters first. Then check saved marks, final CIA submission, question-to-CO mappings, feedback responses, and the applicable assessment policy.

Feature 44 Export analysis and accreditation reports

Where: The loaded analysis page or the SEE page's analysis and report links.

Before you start: Current SEE marks must be submitted for the OBE dossier and SAR Form C-3. Export access must also be enabled.

1. Load one specific subject offering and review the analysis. If a combined-batch option was selected, switch to the individual offering before exporting.
2. Click **OBE Analytics Dossier** on the analysis page, or the OBE analysis download on the SEE page.
3. For the accreditation form, click **NBA SAR Form C-3** where available.
4. Open the downloaded report and check its subject, evidence coverage, and figures.
5. Save a clearly named copy for your course records.

Check: An exported report reflects the data available when generated. Correct incomplete evidence before using it as a final course report.

Student feedback

Feature 45 View feedback for a subject

Where: Other Options > View Student Feedbacks.

1. Set **Feedback Report Type** to **Subject-wise Feedback**.
2. Select the required **Academic Year**.
3. Choose **Select Assigned Subject**.
4. Click **View Feedback Report** if the report has not already loaded automatically.
5. Review the response counts and available CO feedback, Course End Survey, and teaching feedback summaries.
6. Use **Export Excel**, **Export CSV**, or **Export PDF** to download the required report.
7. Open the exported file and confirm its subject and academic year.

Check: Interpret averages alongside response counts. No responses means the report does not yet have feedback evidence.

Feature 46 View your faculty feedback summary

Where: The same feedback screen.

1. Choose **Faculty Self-Appraisal (Comprehensive)** under **Feedback Report Type**.
2. Select an academic year, or choose all available years for a wider summary.
3. Click **Refresh Self-Appraisal**.
4. Review the available summaries across your assigned subjects, classes, and years.
5. Review teaching survey scores and trends where responses are available.
6. Export the report using the displayed download controls.

Check: This is a report of collected feedback. Student participation and survey availability are managed through the college's feedback process.

Course delivery and completion

Feature 47 Match the actual diary to the lesson plan

Where: Other Options > Course Delivery Audit & Reconciliation (NBA Crit 2.2).

1. Select the course and click **Load Reconciliation**.
2. Review the planned lectures and actual diary entries.
3. Choose the matching planned lecture beside each diary entry. Choose **Extra / Compensatory / Revision Class** for a genuine additional class with no planned lecture to match.
4. If your teaching followed the planned order, use **1-Click Auto-Sequence** as a starting point.
5. Check every suggested match. Correct entries where teaching was reordered or a topic took extra periods.
6. Click **Save Mappings**.
7. Review the syllabus coverage and compensatory or extra-period counts.

Check: Coverage depends on saved matching evidence. A high count of conducted periods alone does not prove that every planned topic was covered.

Reset: This clears the selections on the screen. Changes take effect after **Save Mappings**. Auto-Sequence also replaces the current selections, so check all matches before saving.

Feature 48 Save and submit course completion to the HOD

Where: The same reconciliation page.

1. Finish and save the diary-to-plan mappings in feature 47.
2. Enter the completion date for each unit where applicable.
3. Record reasons for schedule deviations, compensatory or remedial measures, and content beyond the syllabus.
4. Review the certification statement. Tick the checkbox only if it is accurate. The current screen requires this checkbox for both draft saving and submission.
5. Click **Save Draft** to retain a completed report for further review without sending it to the HOD.
6. When ready for HOD review, click **Submit Course Completion to HOD**.
7. Review the submission and HOD decision when available. For the review queue, use the college-supplied link to **reviewqueue.php** in the staff portal.
8. If the HOD returns or rejects the report, read the remarks, correct the evidence, and submit again when editing is enabled.

Check: Submission sends the course for HOD review and can lock lesson-plan changes. HOD approval is a separate action.

Improvement actions and follow up

Feature 49 Propose an improvement action

Where: Course reconciliation page > **Log New CQI Remedial Action**, when enabled.

Before you start: The selected subject needs saved CIA attainment evidence and a configured CO target.

1. Select the CO that needs improvement.
2. Select the **Action Category**, such as a remedial class or a teaching method change.
3. Compare the target and attained figures to the course analysis. The saved action uses the CO target and recorded CIA attainment, so correct those source records first if needed.
4. Explain the proposed action under **Remedial Action Narrative & Methodology**.
5. Click **Record CQI Remedial Action**.
6. Check it in the recorded interventions list or review queue.

Feature 50 Revise or record completion of an action

Where: Course review and action tracking at **reviewqueue.php**, using the college-supplied link.

1. Find your action and read its status and HOD remarks.
2. If **REVISION_REQUESTED**, select **REVISED**, enter the revised proposal under **Observations / execution evidence**, and click **Save decision**.
3. After approval, carry out the action and keep evidence of what you did.
4. For an **APPROVED** action, select **COMPLETED** and describe the actual execution evidence.
5. Click **Save decision**.
6. Check for HOD verification and **CLOSED** status later.

Example evidence: "Conducted the SQL practice session on 20 October; retained the attendance sheet and follow-up quiz results."

After revision: REVISED returns the proposal to **PENDING** for another HOD review. Keep any due date shown on the action card in view while carrying out the work.

Feature 51 Download an Action Taken Report

Where: The action card in the review queue.

1. Open the relevant improvement action.
2. Check its proposal, execution evidence, and review status.
3. Click **Download Action Taken Report**.
4. Open the PDF and check that it describes the current state accurately.

Check: Proposed, completed, and closed actions represent different stages. HOD verification closes the action.

Optional AI assistance

Feature 52 Generate and review an AI draft

Where: SEE page > **Optional AI drafts**, if the college enables it.

Use for: Draft observations or proposed improvement actions based on reviewed attainment summaries.

1. Open **Optional AI drafts**.
2. Tick the opt-in preference for the draft type you want and click **Save preference**.
3. Select the **Course** and click **Review source**.
4. Read the source metrics. Correct missing or wrong evidence in the original records first.
5. Select **ATTAINMENT_ANALYSIS** for draft analysis or **ATR_PROPOSAL** for a proposed action plan, then choose the approved **Provider**.
6. Tick the confirmation that you reviewed the metrics and approve sending the summary to that provider.
7. Click **Queue draft**.
8. Return to **Your drafts** to view the status and generated observations or proposed actions.
9. Review the draft against the course evidence before using it. Follow the college's review process.

If the draft fails: Read the displayed error. Use **Retry** if it is available, or contact the administrator if no provider is configured or a queued job does not complete.

To change your preference: Clear the relevant opt-in checkbox and click **Save preference**.

Check: An AI draft is a suggestion. You still need to record, carry out, and obtain review of any formal improvement action through the CQI process.

Course reports and additional tools

Feature 53 Download the course record book or Course Master File

Where: Course reconciliation page, after selecting the course.

1. Select the course and click **Load Reconciliation**.
2. Check lesson plans, diary records, marks, and course completion details.
3. Click **e-Bluebook** for the course record book.
4. Click **Master Course File** for the course dossier, where enabled.
5. Open each PDF and verify the course details, contents, and review status.
6. If records are incomplete, correct the relevant source data and download again.

Other downloads: Attendance and CIA sheets are in features 12 and 14; marks CSV files and attachments in feature 35; OBE reports in feature 44; feedback exports in features 45 and 46; ATR in feature 51.

Feature 54 Open the learning reference

Where: Home > Additional Resources.

1. Find **Click here to learn key strategies for successful outcome-based education**.
2. Open the link to the Knowledge Base.
3. Read the relevant guidance on outcomes, Bloom levels, assessment, or attainment.
4. Return to your course screen and apply the approved department approach.

Bloom levels: Remember, Understand, Apply, Analyze, Evaluate, and Create describe the thinking a learning activity requires.

Feature 55 Correct subject display details if authorized

Where: The **Edit Subject Details** page at **facupdsubject.php**, if your college supplies access. It is not listed in the standard Other Options menu.

1. Open the college-supplied link and choose your assigned subject.
2. Check **Subject Code**, **Subject Full Name**, and **Subject Short Name**.
3. Enter only the approved corrections.
4. Click **Update Subject**.
5. Reload the subject and check the saved details.

Check: Subject codes connect course records and result imports. Ask the HOD or academic section to confirm a code change before making it.

Common problems and who can help

My subject or students are missing

1. Check the academic year, class, section, and subject code.
2. Ask the HOD to verify your subject assignment and student enrollment.
3. Reopen the screen after the mapping is corrected.

A menu is missing or saving is disabled

1. Check for a read-only or feature availability message.
2. Check whether the assessment or course file was already submitted.
3. Contact the HOD or portal administrator with the page name and the exact message.

A form asks me to refresh or log in again

1. Keep a private note of unsaved work if needed.
2. Reopen the page or log in again.
3. Check existing records before re-entering or resubmitting data.

A CSV upload does not give the expected result

1. Download a fresh template for the exact course and component.
2. Keep its headings and student identifiers unchanged.
3. Check marks, required fields, and the CSV file type.
4. Read the upload messages and verify the saved rows before final submission.

Marks or attainment look incomplete

1. Check the selected course and assessment.
2. Verify detailed marks, final submission, question mappings, and feedback response counts.
3. Ask the academic section about missing assessment rules or published result notifications.

A file does not download

1. Check your browser's downloads list and allow the portal's download or new tab if prompted.
2. Check that the feature is enabled and your login is still active.
3. Try the download again. If it fails, share the exact message with the portal administrator.

When asking for help: Include the subject code, class or section, academic year, assessment or session date and hour, the action you tried, and the error text. Share only the records needed through your college's approved support channel.
